Where: OCLC Inc.

6565 Kilgour Place (previously Frantz Rd.)

(Kilgour Building - enter from the East)

(Free parking is available)

Topic: Security

Perfecting Incident Response by Interhack

Many organizations now have plans for handling "incidents" in their organization--a loss of confidentiality, integrity, or availability of an important resource. How well those plans will work, though, can be anybody's guess.

Practice makes perfect. For good reason, incident response training is standard operating procedure in police, fire fighting, and the military. In business, incident response training can run the gamut from tabletop scenarios over the lunch room table to full mock events using real servers and personnel. Drawing on Interhack's experience running live drills with their clients, Lee T. Ayres will discuss the process of planning for, executing, and cataloging the lessons from incident response drills and how to communicate the value of these drills to your business.

About Interhack:

Interhack performs security and privacy assessments, as well as services to work with data in legal proceedings. Our work is used to find the right questions to ask and the best answers science can provide.

Lee T. Ayres, CISSP, is a Senior Analyst at Interhack Corporation, supporting both the Information Assurance and Forensic Computing practices. He helps clients to determine, to build, and to maintain the right level of security for information in their business, providing security assessments and incident response drills. Lee builds custom software to analyze data in legal proceedings and helps attorneys in litigation understand how to make use of the systems and data available to them as evidence.

Security Strategies, What Happens Behind Your Firewall by Gatestone Group

The Gatestone Group is a single-source provider of integrated voice, data and other IT solutions that give their clients a competitive edge. Their broad portfolio is born out of strategic relationships with the industry's best manufacturers, service providers, carriers and application developers.

Security has never been so critical for businesses of all sizes and industries. The Gatestone Group offers several layers of protection and will discuss what every company regardless of size should be aware of and common security pitfalls on voice and data networks to avoid.

Please plan to join us for what is sure to be two great presentations in security that will benefit both all voice, data, IT and telecommunications professionals. As always, the meeting will also let you meet and network with peers from throughout ATP's membership. We look forward to seeing you there!

The meeting fee is \$20 for members and \$30 for non-members. To pre-register, visit the ATP web site at <http://atp-ohio.org>. Your preregistration assists us in keeping our costs down, and provides a more accurate count for seating and lunch.
